

DATA MINING TECHNIQUES FOR
ENHANCING DEPARTMENT STORE SPACE MANAGEMENT

ABSTRACT OF THE DISCLOSURE

A computer method for enhancing department store space management.

- 5 The method includes the steps of providing a department store space-requirements database comprising a compendium of individual department store space-requirements history; providing a department store space-availability database comprising a compendium of at least one of department store space management solutions, department store space information, and department store space diagnostics; and, employing a data mining technique for interrogating the department store space-requirements and department store space-availability databases for generating an output data stream, the output data stream correlating department store space-requirements problem with department store space-availability solution.
